

HANDCRAFTED | 100% UVA & UVB
2-Year Warranty Against Manufacturer Defects

PREMIUM 
prescription and
non-prescription
lenses adapted
for sports and
fashion.

**POLARIZED
PERFECTION!**

Our history of quality, performance, and dedication to client satisfaction allows us to provide one of the strongest limited lifetime warranties on the market.

We produce a wide range of mirrored, and non-mirrored colors and styles in our polycarbonate and glass lenses, specifically designed to reduce glare through our unique polarization process, so that your eyes will stay rested and alert all day long.

OCEAN WAVES LENSES

- » 100% POLARIZED!
- » 100% UV-A and UV-B protection up to 420 NM Anti-Reflective coating inside the lens to reduce bounce-back
- » Mirrors encased between 2 layers of glass

SUNGLASSES

**Craftsmanship,
Technology,
& Passion.**

Our lenses are produced from the highest quality Crown Glass, and have ZERO distortion for clearer vision.

Ocean Waves™ glasses are backed by our craftsmanship, technology and passion for our customers clear vision.

OUR GLASS LENSES HAVE 7 DIFFERENT LAYERS, EACH WITH A SPECIFIC PURPOSE:

Crown Glass (1st & 6th Layer) Our lenses are made from the highest quality Crown Glass (same glass used in binoculars and cameras). Our glass lenses have zero distortion for clearer vision and the toughest materials to scratch.

Mirror Between the Glass Technology (2nd Layer) Our mirrors are encased between two glass lenses making the mirrors impossible to scratch, additionally they are vacuum sealed with 12 separate coatings to produce the utmost consistency with a distortion-free visual clarity.

Polarization Film (3rd Layer) The highest quality polarization and 100% UV-A & UV-B protection in the market, blocking all UV light up to 400NM (nanometers).

Bonding (4th & 5th Layer) We use a vacuum sealing process with the strongest adhesives for crystal clear bonding effect and a chemical bonding process for all of its scratch resistant coatings.

Anti-Reflective Coating (7th Layer) Our anti-Reflective (AR) coating is state-of-the-art. Seven coatings of magnesium hexafluoride are thermally applied via our unique vacuuming process to the inside of the lens to ensure absolute consistency and resilience. The AR coatings absorb "bounce back" of glare and UV light.

» **PLATINUM SILVER - SLV6/SLV8**

Grey Base lens with a Silver Mirror is best for everyday uses such as driving, gardening/landscaping, even intracoastal/offshore fishing. They are the most accurate to color lens that we offer.

» **OFFSHORE BLUE - OSB6/OSB8**

Grey Base lens with a blue mirror and is the most natural to the eye and relaxing to the everyday user. Ideal for offshore and everyday use for those who are in the sun the most. The grey base makes it better than the green for those who are more light sensitive.

» **24K GOLD - GLD6/GLD8**

Grey Base lens with a 24K Gold mirror is a darker lens for those who fish farther offshore as in 30+ miles as well as those who are light sensitive. It is the darkest lens that we currently offer but is not necessarily ideal for everyday wearing. Everyday users may find this lens too dark in any kind of overcast weather or cloudy weather.

» **BACKWATER GREEN - BWG6/BWG8**

Amber base lens with at Green mirror best used for inshore fishing in lakes, rivers, and the intracoastal waterways. The amber base of the lens gives everything a brighter and rosier tint than our grey base lens. It's worn by all of our professional inshore fisherman as their lens of choice for tournaments and professional events.

» **LUMINATOR ROYAL PURPLE - LUM6/LUM8**

Yellow Base lens with a Purple Mirror. This is an enhancing lens ideal for all kinds of low light scenarios from early morning to dusk. Ideal for inshore fishing, site fishing, golfing, and shooting. This lens is the brightest mirrored lens that we have and provides a high contrast experience to the user. It is currently one of the most popular lenses we offer.

» **NON-MIRRORED GREY - GRY6/GRY8**

Grey lens with no mirror. It has a higher light transmission than our mirrored grey lens. Ideal for those who are casual wearers and everyday use as well as inshore and offshore because they are polarized. Provides a nice casual look. If you do not like the mirrors our non-mirrored lens provides a solution to this problem.

» **NON-MIRRORED AMBER - AMB6/AMB8**

Amber lens with no mirror. It has a higher light transmission than the Backwater Green. Ideal for inshore fishing, offshore fishing, and everyday casual wear as they are still polarized. For those who do not like the mirrored look of the Backwater Green the amber lens provides a more casual look to those who do not like the mirrored look.

* If code denoted with 6 it means it is a standard fit for average/large size heads. If denoted with 8 it is a special fit for those with smaller/narrower heads.
